DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims **1-7, 10, and 16** are rejected under 35 U.S.C. 102(e) as being anticipated by **Reed, Jr., U.S. Patent No. 6,421,077**.

Considering claim 1, Reed discloses a method and apparatus for detecting the presence of a co-channel interference signal and, in response to detecting such an interference signal, utilizing a co-channel interference rejection filter. Specifically, the present invention monitors the status information generated by the error detecting/correcting circuitry of a signal receiver such as a high definition television (HDTV) receiver. A counter is used to determine an error rate. While this first error rate is being determined, the filter is not used within the signal path of the receiver. The filter is then switched into the signal path of the receiver and a second error rate is determined. The first and second error rates are then compared and if the first error

rate is the same or lower than the second error rate, the co-channel interference rejection filter is not utilized. Otherwise, the co-channel interference rejection filter is used in signal path of the receiver to remove an interference signal that is interfering with the proper demodulation of the received signal. See abstract. The system of Reed comprises IF filter and Synchronous Detector 106, NTSC rejection Filter 108, and MUX 110, Fig. 1. See also col. 1, lines 25-50.

Considering claims **2-4**, Reed discloses that the multiplexer 110 is "controlled by the co-channel interference detection circuit 101". See col. 3, lines 44-46.

As to claim **5**, Reed discloses synchronous detector 106 inherently detects the television signal sync pulses including vertical, horizontal and horizontal sync pulses.

Regarding claim **6**, Reed discloses NTSC Rejection filter **108**, fig. 1;

Regarding claim **7**, Reed discloses the NTSC standard that is one example of the conventional television standards, which standard includes SECAM and PAL.

Considering claim **10**, IF filter and synchronous detector **106** and Reed discloses NTSC Rejection filter **108**, fig. 1.

Considering claim **16**, see rejection of claim 1;

Allowable Subject Matter

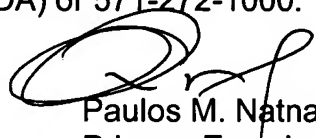

3. Claims **12-15** are allowed.
4. Claims **8-9, 11, and 17-21** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
